<u>AMENDMENTS TO THE SPECIFICATION</u>

Please replace the paragraph on page 7, line 18 with the following paragraph:

Referring now to FIG. 5, there illustrated a window 500 showing an integrated and cascading menu feature of the present invention. Integration of the hosted application (also known as a server application) with the IDE can result in conflicts between similarly named menu items. Here, integration of the IDE and the hosted application causes a menu conflict such that at least the View menu items are in conflict. The IDE modifies its existing View menu 502 to include the hosted application menu (accessible through and notated as Server View Commands). The IDE presents to the user text that clearly identifies the location of the server View menu options within the IDE View menu 502. An expansion arrow associated with the Server View Commands menu option facilitates accessing the cascaded server submenu items.
